

New Wings for your dreams.

A brand new development, which draws benefits from 25 years of experience with lift systems.

FS3 “Attitude”

This revolutionary treatment support system offers you a lift range of 26". This has never been done before! It lifts 400 lbs from 12" to 38". We offer straight up down motion, no back and forth shifting. Many lift tables shift as much as 12" back and forth as they move up and down. If your room is small, working at the head and foot end can be difficult. This amazing lift range will provide therapists of all heights the ability to position their patients at the level most convenient for their work. Whatever form of deep connective tissue work you practice, now you can truly employ your upper body weight and get superior results with less effort!. Use your weight and save your strength! The new frame design also gives you excellent access to your work from the side of the table. The mid section of the top is less than 20" wide when the side extensions are removed. Reaching is minimized.
